

Before you build: code check

Record the rules and design documents that apply to this job. This is a verification worksheet, not a list of universal code limits.

Identify the rule before copying the number

Check	Record / confirm
Location	Country, state/province and local authority
Project scope	Building class, use, new work or alteration
Applicable edition	Code edition, adoption date and transition provisions
Exact provision	Clause/table, exceptions and official source URL
Approved design	Drawing revision, engineering details and specifications
Site conditions	Wind, soil, exposure and other design inputs

Requirement record

Job / address	Building class / use
Local authority	Code edition / adoption date
Clause / table and official source URL	
Rule or limit (include units and scope)	
Plan reference and any local changes	
Question to resolve / person to ask	
Checked by	Date checked

Before cutting, ordering or signing off, resolve any mismatch between a web guide, the adopted code and the approved design with the responsible designer or certifier. Do not treat a model-code number as the rule for every location.

Source-check method: chippy.tools/building-codes/editorial-policy/
